The S-Network BlackSwan Tech & Treasury IndexSM

Index Description. The S-Network BlackSwan Tech & Treasury IndexSM (QSWNXT) is designed to potentially protect capital against BlackSwan events: those that are rare, unpredictable, impactful and difficult to attribute to reason, even after they occur. With the majority of assets in historically low-volatility Treasuries, remaining assets are used to purchase “in-the-money” calls (options with a strike price below the market price on the Nasdaq-100). The goal is to achieve capital appreciation above inflation while minimizing volatility as compared to standard asset-allocated investments.

Methodology. QSWNXT reconstitutes and rebalances semi-annually in June and December, allocating 10% weight to 70-delta, long-dated QQQ options, and the remaining 90% to a US Treasury bond ladder targeting the 10-year Treasury’s modified duration.

Index Data. QSWNXT is calculated daily by Alerian S-Network Global Indexes, and end-of-day index values are distributed daily via the Cboe Streaming Market Indices (CSMI) feed. Live production of the Index was launched on November 30, 2021, with Index data backtested from December 5, 2006 (i.e., calculated to reflect how the Index might have performed over that time period if it had existed). There may be material differences between backtested performance and live-production performance. Past performance — whether live or backtested — is no indication or guarantee of future performance.
