The S-Network BlackSwan Core IndexSM

Index Description. The S-Network BlackSwan Core IndexSM (SWANXT) is designed to potentially protect capital against BlackSwan events: those that are rare, unpredictable, impactful and difficult to attribute to reason, even after they occur. With the majority of assets in historically low-volatility Treasuries, remaining assets are used to purchase “in-the-money” calls (options with a strike price below the market price on the S&P 500). The goal is to achieve capital appreciation above inflation while minimizing volatility as compared to standard asset-allocated investments.

Methodology. SWANXT reconstitutes and rebalances semi-annually in June and December, allocating 10% weight to 70-delta, long-dated SPY options, and the remaining 90% to a US Treasury bond ladder targeting the 10-year Treasury’s modified duration.

Index Data. SWANXT is calculated daily by S-Network Global Indexes, and end-of-day index values are distributed daily via the NYSE Global Index Feed. Live production of the Index was launched on October 17, 2018, and Index data from the inception date of December 6, 2005 up to the launch date of live production is backtested data (i.e., calculated to reflect how the Index might have performed over that time period if it had existed). There may be material differences between backtested performance and live-production performance. Past performance — whether live or backtested — is no indication or guarantee of future performance.

Max Drawdown Table

SNET BlackSwan Core TR				
	Date	% Change	Period	Days
Peak	2/20/2020		Drawdown	28
Trough	3/19/2020	-10.22%	Recapture	41
Recovery	4/29/2020	11.46%	Total	69

S&P 500 TR				
	Date	Change	Period	Days
Peak	2/19/2020		Drawdown	33
Trough	3/23/2020	-33.79%	Recapture	140
Recovery	8/10/2020	51.24%	Total	173

	SNET BlackSwan Core TR	S&P 500 TR
Total Return	56.52%	75.69%
